Hy-tex

The Standard of Quality in Brick

*Residence of Arthur H. Fuerbacher,
West Brentmoor, St. Louis County.
Faced with Hy-tex Velour Mats,
laid in Flemish Bond, wide flush
rough cut joint.*

Architect, M. P. McArdle, St. Louis

¶ Our widely extended plants and branch offices throughout the country assure the architect and builder of an unequalled capacity for prompt and responsible service.

¶ Whatever your design may be, you will find a Hy-tex brick that exactly meets your purpose in tex-

ture or color—smooth or rough in every variety of Red, Buff, or Gray tones. Send for the “Hy-tex Brick Catalogue.”

¶ It is our special aim to co-operate, so far as we can, with the architect in furthering the development of a better brick architecture in this country.

Boston Representatives: WALDO BROTHERS, INC., 45-49 Battery March St.

Hydraulic-Press Brick Company

Saint Louis

Branch Offices: Baltimore, Chicago, Cleveland, Davenport, DuBois, Pa., Indianapolis, Kansas City, Minneapolis, New York City, Omaha, Philadelphia, Roseville, O., Toledo, Washington, D.C.

Barrett Specification Roofs

**On the Greatest Office
Building in the World**

THE Equitable Building is the greatest office-building in the world. It covers an entire New York City block.

From the foundations to the roof, towering forty stories from the ground, it represents the last word in architecture and in engineering science, as applied to the construction of modern fireproof buildings. It is one of the show-buildings of the country, and one of the many great structures that help to form that jagged sky-line of lower New York, famous the world over.

And like most of these buildings, the Equitable is covered with a Barrett Specification Roof.

So it is all over the country. The big permanent structures, such as railroad terminals, factories, skyscrapers, apartments, hotels, etc., are usually covered with these roofs.

They are more popular for permanent buildings than any other type, because they cost less per year of service, nothing for maintenance, and take the base rate of fire insurance.

In addition they are guaranteed for twenty years under the following conditions:

20-Year Guaranty

The 20-Year Guaranty is now given on all Barrett Specification Roofs of fifty squares and over in all towns in the United States and Canada with a population of 25,000 and over, and in smaller places where our Inspection Service is available. Our only re-

A copy of The Barrett 20-Year Specification, with roofing diagrams, sent free on request

The **Barrett** Company

*Largest Manufacturers in the World of Roofing and

proofing Contractors
New York City

Copyright, 1913, by the Equitable Office Bldg. Corporation

quirements are that The Barrett Specification, dated May 1, 1916, shall be strictly followed and that the roofing contractor shall be approved by us.

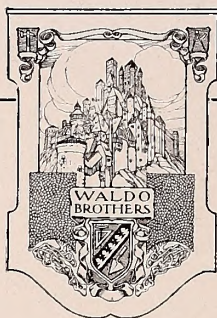

What This Means to You!

You can secure exactly the same roof for your client as covers the Equitable and other huge structures by simply including The Barrett Specification, dated May 1, 1916, in your roofing specifications.

Barrett Waterproofing Also Used

Barrett Specification Pitch-and-Felt Waterproofing also does service in the great Equitable Building. Over 200,000 square feet are in use to protect the bank vaults, kitchens, refrigerators, pits, etc., as well as underneath and around the deep cellars that penetrate to a depth of fifty-two feet.

MEMORANDUM OF RECENT OPERATIONS

ATHENS, GREECE

Surgical Building; Children's Hospital Building; School of Domestic Science.
Gordon Allen, Architect, 45 Bromfield Street, Boston.

WEST HAVEN, CONN.

Group of Hospital Buildings and Power House.
Tuberculosis Annex, New Haven General Hospital.
Messrs. Scopes & Feustmann, Architects, New York.
Messrs. Tenney & Ohmes, Engineers, New York.
Including system of forced hot water heating, automatic control of temperature regulation, and vacuum sweeping system. All of the latest and most efficient equipment.

NEW HAVEN, CONN.

The Brady Memorial Building and Administration Building of the New Haven General Hospital.

L. W. Robinson, Architect, New Haven.
Day & Klauder, Associate Architects, Philadelphia.
J. Byers Holbrook, Engineer, New York.

Installation of vacuum heating system in the buildings of the New Haven General Hospital, at New Haven, Conn.
Twenty-five buildings in all.

J. Byers Holbrook, Engineer.
Dr. S. F. Cox, Superintendent New Haven General Hospital, in charge, representing the above corporation.

BOSTON, MASS.

New Construction at the New England Hospital for Women and Children.
John A. Fox, Architect.

AYER, MASS.

Entire installation of heating plants at Camp Devens, comprising over one-half million feet of radiation, employing two hundred and fifty pairs or more of men.
Entire work to be completed in ten weeks.

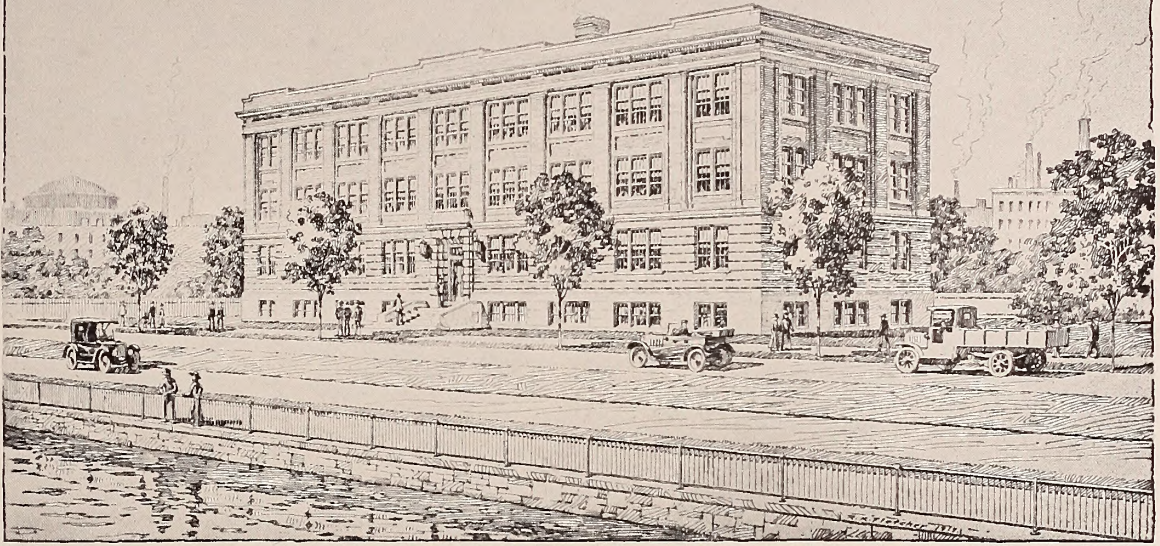

QUINCY, MASS.

Fore River Ship Building Plant, Battle Cruiser Slip, No. 1; four Destroyer Slips, comprising several thousand feet underground fire lines, air compressor lines, drinking water lines. Complete installation in ten weeks.

Special line of approximately twelve hundred feet six-inch, lap-joint steam piping for two hundred fifty pounds working pressure, involving numerous bends, cast steel fittings, cast steel valves — line crossing river beneath bridge for over two hundred feet, passing through trench, overhead through other buildings, into the power house. Lines furnished and erected complete within ten days.

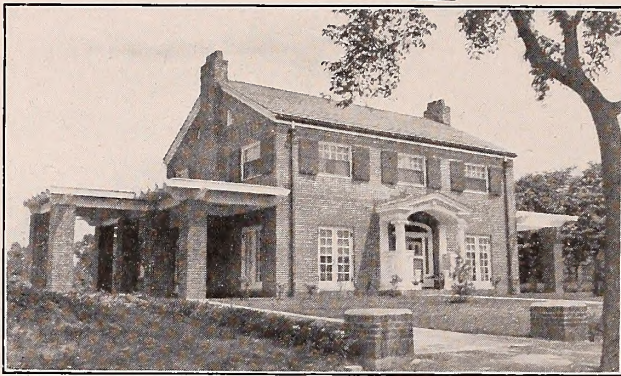

Other representative work described in the brochure issued by and obtainable from The Merrill Company on application.

STEARNS Florida Gulf CYPRESS

whether used for shingles, for the interior trim, or for the gutters, mouldings, and conductors, combines supreme serviceability and almost endless life with exceptional possibilities as a decorative feature.

This House

illustrates the possibilities of "STEARNS Florida Gulf CYPRESS" for exterior use. The physical nature of this remarkable grade of Cypress is such that it is absolutely unaffected by the various internal pests and external destructive influences that sooner or later cause many other woods to crumble and decay.

BUT—the architect must most distinctly specify "STEARNS Florida Gulf CYPRESS" in order to get all that Cypress has come to imply.
Send for all the facts

The A. T. STEARNS LUMBER COMPANY

Charles W. Bates, Architect
Stucco of Medusa Waterproofed White Cement

Insure the Permanent Beauty of Stucco!

A stucco home has character, dignity, individuality — but the important feature is to prevent discoloration and hair-cracks, and eliminate that water-soaked appearance after a rain. Medusa Waterproofed White Cement is the ideal stucco material—in fact rains will wash and clean the surface.

The keenest of satisfaction — the consciousness of work well done—is one of the chief reasons why you should specify Medusa Waterproofing and Medusa Waterproofed White Cement. Over 10 years of successful use in all kinds of concrete work establishes beyond question the claim that—"Medusa means permanence."

Hy-tex
The Standard of Quality in Brick

*Residence of Arthur H. Fuerbacher,
West Brentmoor, St. Louis County.
Faced with Hy-tex Velour Matts,
laid in Flemish Bond, wide flush
rough cut joint.*

Architect, M. P. McArdle, St. Louis

¶ Our widely extended plants and branch offices throughout the country assure the architect and builder of an unequaled capacity for prompt and responsible service.

¶ Whatever your design may be, you will find a Hy-tex brick that exactly meets your purpose in tex-

ture or color—smooth or rough in every variety of Red, Buff, or Gray tones. Send for the “Hy-tex Brick Catalogue.”

¶ It is our special aim to co-operate, so far as we can, with the architect in furthering the development of a better brick architecture in this country.

Barrett Specification Roofs

On the Greatest Office Building in the World

THE Equitable Building is the greatest office-building in the world. It covers an entire New York City block.

From the foundations to the roof, towering forty stories from the ground, it represents the last word in architecture and in engineering science, as applied to the construction of modern fireproof buildings. It is one of the show-buildings of the country, and one of the many great structures that help to form that jagged sky-line of lower New York, famous the world over.

And like most of these buildings, the Equitable is covered with a Barrett Specification Roof.

So it is all over the country. The big permanent structures, such as railroad terminals, factories, skyscrapers, apartments, hotels, etc., are usually covered with these roofs.

They are more popular for permanent buildings than any other type, because they cost less per year of service, nothing for maintenance, and take the base rate of fire insurance.

In addition they are guaranteed for twenty years under the following conditions:

20-Year Guaranty

The 20-Year Guaranty is now given on all Barrett Specification Roofs of fifty squares and over in all towns in the United States and Canada with a population of 25,000 and over, and in smaller places where our Inspection Service is available. Our only re-

A copy of The Barrett 20-Year Specification, with roofing diagrams, sent free on request

quirements are that The Barrett Specification, dated May 1, 1916, shall be strictly followed and that the roofing contractor shall be approved by us.

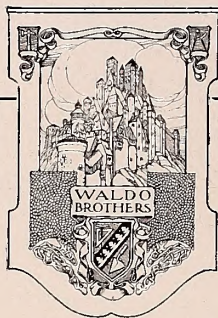

What This Means to You!

You can secure exactly the same roof for your client as covers the Equitable and other huge structures by simply including The Barrett Specification, dated May 1, 1916, in your roofing specifications.

Barrett Waterproofing Also Used

Barrett Specification Pitch-and-Felt Waterproofing also does service in the great Equitable Building. Over 200,000 square feet are in use to protect the bank vaults, kitchens, refrigerators, pits, etc., as well as underneath and around the deep cellars that penetrate to a depth of fifty-two feet.

STEARNS Florida Gulf CYPRESS

whether used for shingles, for the interior trim, or for the gutters, mouldings, and conductors, combines supreme serviceability and almost endless life with exceptional possibilities as a decorative feature.

This House

illustrates the possibilities of "STEARNS Florida Gulf CYPRESS" for exterior use. The physical nature of this remarkable grade of Cypress is such that it is absolutely unaffected by the various internal pests and external destructive influences that sooner or later cause many other woods to crumble and decay.

BUT—the architect must most distinctly specify "STEARNS Florida Gulf CYPRESS" in order to get all that Cypress has come to imply.
Send for all the facts

Stucco of Medusa Waterproofed White Cement

Insure the Permanent Beauty of Stucco!

A stucco home has character, dignity, individuality — but the important feature is to prevent discoloration and hair-cracks, and eliminate that water-soaked appearance after a rain. Medusa Waterproofed White Cement is the ideal stucco material—in fact rains will wash and clean the surface.

The keenest of satisfaction—the consciousness of work well done—is one of the chief reasons why you should specify Medusa Waterproofing and Medusa Waterproofed White Cement. Over 10 years of successful use in all kinds of concrete work establishes beyond question the claim that—"Medusa means permanence."

A SEPARATE DEPARTMENT FOR ECCLESIASTICAL REQUIREMENTS

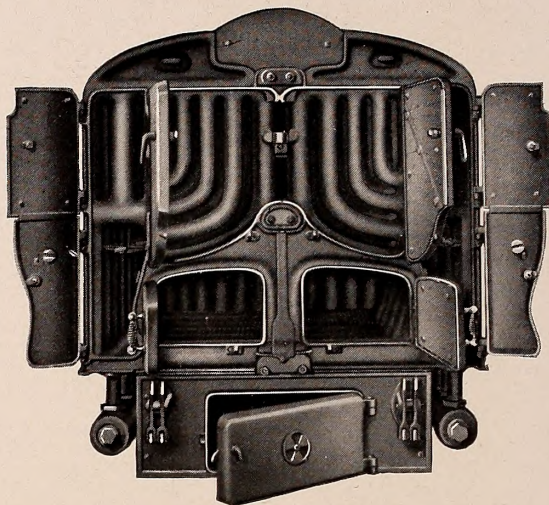

The Things That Serve Best — Regardless of First Cost

The equipment of a building, the heating-plant for instance, often tests the wisdom of the architect quite as much as does the structure itself.

Heating engineers co-operating with architects to select a boiler for dependable service, adequate capacity, and economy of operation like to see in the specifications the

Mills Water Tube Boiler

because the fire surface is properly formed and located for quick, economical heating; the grate area is correctly proportioned to the fire-surface; and the drum-and-screw-nipple construction contributes to flexibility in selection of heating unit and eliminates the erection man's troubles. There are no interior push nipples.

A Story of Fire Told in Fireproof. Atlantic Terra Cotta

IN six quaint Terra Cotta panels over the doors of the Inman Square Fire Station in Cambridge, Mass., Newhall & Blevins, the Boston Architects, have told the story of fire protection from the days of bucket brigade and hand-engine to the modern high-speed, high-powered motor apparatus. It is singularly appropriate that this story should be thus graphically told in a building material that has done so much to reduce fire hazards in American cities.

As an artistic, durable, fireproof building material, Atlantic Terra Cotta commends itself to the architect who desires to obtain pleasant decorative effects in a medium of demonstrated economy and structural efficiency. The uniformly

accurate workmanship and high quality of materials that distinguish all Atlantic Terra Cotta give assurance that the finished structure will adequately measure up to the architect's conception expressed in his design.

Webster

SYSTEMS OF STEAM HEATING

are installed in many of the most prominent Manufacturing Plants, Colleges, Schools, Office Buildings, Apartment Houses, Residences, Churches, Hospitals, Hotels, Theatres, etc., throughout the New England States.

The Webster Vacuum System utilizes exhaust steam for the heating of large buildings. The Webster Modulation System is for buildings where low pressure steam, or vapor, is used. Old buildings can be "Websterized" often at comparatively small expense.

The heat in each room can be controlled by Webster Modulation Valves. Webster Sylphon Traps are placed at radiator returns and drip points.

Water-hammering, air binding and excessive coal bills are overcome, and the most efficient and economical heating service secured. Perfect circulation of steam is assured. "The Webster Guarantee is the Owner's Insurance Policy."

Webster Engineering Service is the result of 29 years' experience, during which time there have been over 10,000 successful installations of Webster systems.

JENKINS BROS. RADIATOR VALVES

THE special grade of new steam metal used—the heavier, stronger construction—make these valves longer service valves. They stand the strains of expansion and contraction, and the lifting and settling of piping better than light valves not built to a service standard.

There is a Jenkins Bros. Valve for practically every purpose—for steam, hot water, cold water, air, or gas. Jenkins Bros. Valves are made in brass, iron, and cast steel, for moderate, medium, heavy, and extra heavy pressures. And every valve with the Diamond Trade Mark is a safe valve for the architect to specify.

Raise the Worth of Your Work

Make the buildings that you build *last*. Make them better looking. Make them waterproof. And do it with Bay State Coating. Bay State Brick and Cement Coating fulfills its name worthily. Just a coat or two completely covers, protects and beautifies *any* brick, cement or stucco wall.

Bay State *Brick and Cement* **Coating**

You have built a house. From foundation to roof it's just as you want it—looks as if it had just been taken from the proverbial bandbox. Don't you dread to see the first storm leave its imprint on the walls? To realize that from then on wet weather will rapidly destroy your handiwork? Bay State Coating comes in white and a variety of tints. Puts a good complexion on

old or new walls, and keeps it there.

We should form a Society for Prevention of Wall Destruction—you should be a charter member. We will be glad to send you our booklet No. 15 which tells of thousands of buildings all over the country coated and protected with "Bay State." A sample of any tint you want will help you decide whether you will join us.

WADSWORTH, HOWLAND & CO., Inc., Boston, Mass.

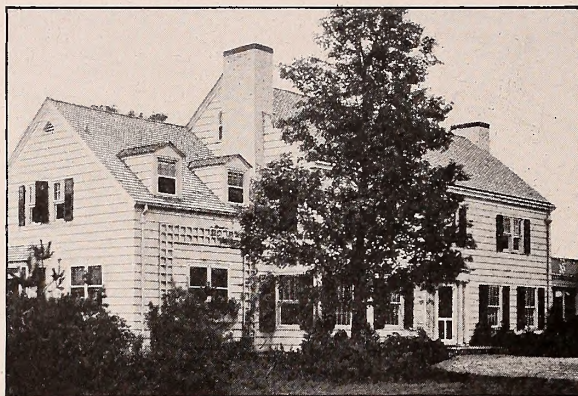

Paint and Varnish Makers

New York Office: Architects' Building

Bay State Cement Crack-Filler is the first-aid treatment to walls that crack. It is easily applied and not detectable.

Bay State Agatex makes cement-floors dustproof, waterproof, oil-proof and every-other-kind-of-proof. Our booklet A 15 will tell you more about it.

Walls finished with Cabot's Old Virginia White. Roof stained with Cabot's Creosote Stains. J. W. O'Connor, Architect, New York

Cabot's Creosote Shingle Stains

The original and standard shingle stains. Soft, rich and transparent coloring effects, guaranteed wearing qualities, thorough preservation of the wood. The thoroughly reliable stain, proved by thirty-five years' use under all conditions.

Cabot's Old Virginia White

The Modern Architectural Outside White

The clean, brilliant "whitewash white" effect of Old Virginia White has real distinction. It is a softer and yet a brighter white than paint, and its texture and color-values are essentially different in character from the heavy, hard paint coating. This makes it especially appropriate for the modern "Colonial," because it gives the house at once the aspect of well-groomed old age—a result that it would take years to accomplish with paint.

Cabot's Old Virginia Tints

This softness and textural quality have led many of the leading architects to call for the same compound in tints, and Cabot's Old Virginia Tints are now made in a wide variety of delicate shades. The tones are almost pastel-like in quality, and the effects produced are most unique and pleasing.

Cabot's Stucco Stains

For staining and rainproofing cement buildings. Rich colorings, without gloss or shine, and with no coating to chalk or peel.

Cabot's Waterproof Brick Stains

Made in various colors, for faded, off colored or uneven brick, and colorless for waterproofing only.

Cabot's Sheathing and Deafening "Quilt"

Warmer, more permanent, and cheaper than back-plaster. The most scientific, sanitary, and perfect heat insulator and sound deadener ever made.

Conservo Wood Preservative

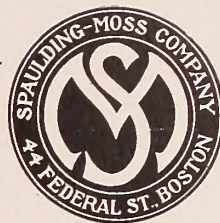

For preserving posts, sills, planks and all similar woodwork.

Dampproofing

An adhesive damp course for direct plastering.

CATALOG ON REQUEST

Samson Spot Sash Cord

Made of extra quality cotton yarn, firmly and evenly braided and
smoothly finished. Carefully inspected and guaranteed free from
the imperfections of braid and finish which make common, roughly
braided cord wear out quickly in running over the pulleys.

Can be distinguished at a glance by our trade-mark, the Colored
Spots.

REPRESENTATIVES OF
P. & F. CORBIN

“FISKLOCK”---“TAPESTRY” BRICK

Hardoncourt-Fiske Patents

Here is an 8-inch brick wall, to all outside appearances built of “Tapestry” Brick, with its regular unit size, beautiful colors, texture and mortar joints.

It is fire proof, vermin proof, moisture proof, and is stronger than walls of either hollow tile or solid common brick.

Yet it is a hollow wall with 2-inch horizontal air spaces, giving maximum insulation against heat, cold and moisture.

Most remarkable of all, it is cheaper than any other form of face brick construction whether solid brick or brick veneer. It costs less than terra cotta hollow tile covered with stucco and about the same as first quality stucco-on-frame. It costs only three and one half per cent to five per cent more than frame-clapboard.

“Fisklock” is the “perfect building material” at last.

It is sold under the “Open Price Policy”—the same price to all.
